## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-3, 5 and 7-10 are allowed.
2. The following is an examiner's statement of reasons for allowance: The closest prior art of a record,

Teraura (U.S. Patent No. 6,827,279) discloses a sheet of printing paper has an RFID tag for receiving, storing, and transmitting data through radio wave signals. A copy machine can copy the RFID data from the RFID tag on the sheet of document paper to the RFID tag on the sheet of printing paper in addition to the image copying.

Teraura (U.S. Patent No. 6,827,279) does not disclose, teach or suggest, a an image forming system, apparatus or a computer program encoded in a computer-readable medium when executed by the computer and a method for forming an image, which is displayed on an image display member, on a recording medium, comprising:

outputting a first parameter indicating at least one of a way to form the displayed image and a formation history of the displayed image to an external unit by the image display member;

writing the read first parameter and a second parameter containing a history updated in response to the image formation on the recording medium into the recording medium,

wherein the history contained in the second parameter includes information indicating a previous printing of the image formed on the recording medium in an n-up printing mode and information indicating the value of n, where n is a positive integer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Minami et al. (U.S. Patent No. 7,048,194) teaches a printing paper 70 with memory element 80 storing printing information used for printing, such as a paper size and a paper type and transmitting the printing information by radio wave. The filing date of this patent does not qualify as prior art.

Kawano et al. (U.S. Patent No. 7,385,723) teaches an image formation device including: an image reading section which reads an image from an image formation member, at which image formation member the image is formed and a hologram recording medium is mounted, associated information relating to the image being stored as a hologram in the hologram recording medium; an information acquisition section which acquires the stored associated information from the hologram recording medium; an image processing section which processes the image read by the image reading section in accordance with the associated information acquired by the information acquisition section; and an image formation section which forms an image processed by the image processing section. The filing date of this patent does not qualify as prior art.
